

# 6 COINS TO 6 MILLION DOLLARS

THE CRYPTO AGENDA

### **DISCLAIMER**

Nothing given is to be taken as financial or medical advice. If you are looking for financial advice, please contact your financial adviser. Everything given is purely speculation - nothing more, nothing less.

## **Welcome to my 6 COINS TO 6 MILLION DOLLARS report.**

I would like to firstly take the opportunity to thank you for your interest and support in joining today's show with Kerry Cassidy of Project Camelot and The Crypto Agenda.

I have put together a small list of coins for you that I believe to be not only incredible investments but the future of rock n roll.

I think people often mistake the work that we do with simply focusing on greed, however I have a very sincere passion for helping people. One of the ways I facilitate this is through remote viewing, but in addition to this I also am a very thorough researcher.

Many of the coins I have looked at over the last several years have amazing technologies associated with them which the majority of the world does not know exists. I hope to be able to bring this out to the public in the most professional way possible.

Before I remote view anything, there are two things I always look for in any aspect of my life, and the same applies to these coins - they must add value and solve problems. Providing these two characteristics remain true, they will always outperform anything and everything else.

With over 5500 cryptocurrencies worldwide, I believe only 144 will stick around. I have my top 33 coins which I am very excited about as many are still just pennies, however today, I am giving you my top 6 choices.

Most people do not realize VeChain partnered with Walmart just a few days ago.

Take the example of a farmer growing corn. From the inception of when a seed is planted, to tracking how often it was watered and how much sunlight it

received, when the corn was harvested, a QR code is slapped on the corn, then it goes through the shipping and the warehouse distribution process, the corn being placed onto a pallet and the pallet being broken down further etc. You can track it every step of the way.

By the time it hits the grocery store shelf, if you have a question about the product, you can very easily take out your smart phone, scan the QR code, and you will have access to full, date-stamped information that has been recorded permanently on the blockchain. Information such as what, when, who, why etc. - you will know everything about that product, including were chemicals used and is it non-GMO and much more.

This technology can help in many different ways, and I am fascinated and super excited to watch it unfold.

VeChain privately partnered with Walmart and they publicly announced it just recently, but I do not think people realize that everything that has happened worldwide since January started in China first.

From the Corona virus to toilet paper shortages and food issues - it all started in China first.

In my previous interview with Kerry Cassidy of Project Camelot, I talked about food shortages becoming an issue. Within just a few short weeks following the interview, the soup aisle was completely empty along with eggs, milk, meat and more.

I believe they are going to get rid of meat completely in the future. All of this could be simplified through blockchain by adding value and solving problems.

For these six coins discussed within this report, I have put in the time and gone back and done the research. The other aspect I look at is who they are partnered with.

Another of these six coins is Stellar. Stellar was created through IBM computers. IBM was very close to filing bankruptcy not that long ago. They were partnered with Barclays Bank and Citibank. These two banks have been around for a long time and I doubt they are planning to lose.

Everybody always looks to the next flashy, shiny new object - the next Bitcoin - the next big thing - the instant gratification - the "get me rich next month" thing. I hate to have to break it to you, but it does not work that way. Sometimes people do get lucky and they do get rich, but most people who do not have a financial education lose. My uncle always says...

*"a fool and their money are soon parted"*

People always think about the now, rather than looking at the 5 or the 10 year plan. They are not looking at the roadmap or the blueprint or the project or the goals that the company has or what they are going to offer.

I believe that if people actually took a moment to think about the long haul rather than the short term, everyone's views would change. People who look at the 5 or 10 or 20 year plan are very wealthy.

I am giving this six years because I think these coins have a little more work to be done. They will stick around due to their partnerships with multi-billion dollar corporations that will not be going anywhere.

Sears is a multi-billion corporation, but it is currently on its knees because it is stuck in the Y2K era. It will not move into Facebook or social media or advertising.

This is just like many of the cryptocurrencies from 2017 when Bitcoin jumped up. Many of the people in the crypto community are stuck in 2017. Coins always need to add value and solve problems. The problem is many of the coins from 2017 stopped adding value and they stopped solving problems.

Now there are a whole bunch of new coins that have come out, and several of these have stood the test of time and are still ahead of everybody else.

**IT IS VERY IMPORTANT TO STAY AHEAD OF THE GAME!**

Without going into any more detail, my top choices are...

VeChain (VET) - partnered with Walmart.

Cosmos (ATOM) - has major partnerships with hundreds of multi-billion dollar corporations

Stellar (XLM) - partnered with Barclays and Citibank

Two coins to be used for cloud data storage that will revolutionize the way the internet and data is transmitted and stored world-wide...

Siacoin (SC)

Filecoin (FIL)

**WARNING**

**I BELIEVE WE ARE HAVING ANOTHER DIP/SLAM DOWN  
COMING WITH BITCOIN!**

There is currently a push for Ethereum, although I believe, based on something I saw after doing hundreds of hours of research, Cardano (ADA) is going to be a replacement for the Ethereum protocol in the future.

Some of the tokens on the Ethereum network will thrive for the long haul, however I think we will see a major shift in the paradigm thinking of the banks and the major institutions when the mainnet of Cardano is launched in the near future.

## COIN SUMMARY

- VeChain (VET)
- Cosmos (ATOM)
- Stellar (XLM)
- Siacoin (SC)
- Filecoin (FIL)
- Cardano (ADA)

I would like to thank everyone for your support and continued support.

We have a public crypto chat I would love to invite you to. We are here 24 hours a day 7 days a week willing to assist with anything needed. This group was created specifically because there is no cryptocurrency group, no investment group, no group where there are many intelligent, business like-minded people who come together and talk. There is some "goofiness" in the group, but you need to have some fun along the way.

If anyone at any time needs anything regarding cryptos, blockchain technologies or the future of money, please come and join us. We are happy to assist.

We are a family willing to help at all times.

In the early days, I could not find help when I needed it, and I lost a lot of money as a result. I was scammed by various cryptocurrencies and nobody was there to help due to everyone being money hungry. Nobody had time to think about me. I wanted to make sure that nobody ever has to go through that.

Our group I am referring to is called the Public Crypto Chat on Telegram (link below) and we are here for you guys.
